

1 ABSTRACT OF THE DISCLOSURE

2
3 A flexible clip applier includes a flat wire wound tubular
4 coil, a pair of jaws at the end of the coil, end effector wires
5 extending through the coil and coupled to the jaws, and a clip-
6 advancing wire extending through the coil. A proximal handle is
7 adapted to impart tensile force the end effector wires and the
8 tubular coil, and compressive force to the clip-advancing wire and
9 tubular coil to thereby effect advancement of a clip into the jaws
10 and over tissue compressed between the jaws, and deformation of
11 the clip over the tissue.
